

I am an XM Satellite Radio subscriber and the variety and quality that it provides far exceeds the local AM and FM broadcasters in the areas I live and work. Considering how this is a subscription service, it should not be up to the National Association of Broadcasters to dictate what I am permitted to hear. The traffic and weather channels that XM provides are a great benefit to me when I am travelling for business. I respectfully urge you to REJECT the NAB's petition 04-160 and support the programming that I have come to love and depend on.
